Abstract: This article presents some results of the project entitled "The use and appropriation of ICT by family agriculture in the Vale do Caí-RS", financed by the edict of MCTI/CNPq, FAPERGS and UNISC. The objective of this article was to outline the socioeconomic profile of family farmers and to analyze the use and appropriation of Information and Communication Technologies (ICT) by family farmers in the Vale do Caí. Eight municipalities with the largest number of family farming establishments were selected, and semi-structured interviews were conducted with 375 family farmers. The data were tabulated through the Statistical Package for Social Sciences (SPSS) and analyzed from simple statistical treatment and content analysis. It has been verified that family farmers analyzed have access to ICT. However, the use and
