

Editorial | Bringing small farmers closer to data access and use: building bridges between their needs and ICT

Jacquelin Teresa Camperos Reyes^a & Fábio Mosso Moreira^b

Abstract: This editorial comment on contribution of research results involved with access and use of data by the small farmers. Were established relationships between the articles published in this edition of RECoDAF, which are the perceptions obtained in case studies carried out with producers, and that disclose proposals for the development and application of technological resources, demonstrating, as well, the possibilities of attending to the informational needs reported to this segment starting from new information technologies.

Keywords: Data access. Information and communication technology. Informational needs.
