

ICTs and affective-productive relations in family agriculture

Ada Cristina Machado da Silveira^a

Abstract: The article brings aspects of scientific research associated with gender relations in the intersectionality with the family farm theme. The general objective focused on identifying the values associated with the role of women in the management of gender relations in family farming taken as mediators of affective-productive relations through the use of ICTs. The analysis of the subject in the scientific literature in the first decade of the 21st century allows us to know the characteristics of digital inclusion in the Brazilian rural world.

Keywords: ICTs. Family farming. Gender. Rural development.
