

Knowledge management by students with farmers' families

Renata Pinheiro^a & Cassia Regina Bassan de Moraes^b

Abstract: The objective of the research is to verify, among students at ETEC Paulo Guerreiro Franco, if the technological knowledge acquired during the course is passed on to their family members belonging to the rural field, whether in families with the production of their own support or who benefit from productive management with family farming. The methodology consists of a Bibliographic Review and a Descriptive Research. The technique used for data collection was the survey, applied in the third series of Technical Education in Agriculture Integrated to High School. The results show that teaching by skills adds positively to the formation of professional education.
